Purpose

This policy establishes SnowBe Online's requirements for developing, maintaining, and improving the organization's security maturity over time. It defines how SnowBe evaluates its current security capabilities, identifies gaps, and implements improvements aligned with business objectives, risk management priorities, and industry frameworks. The purpose of this policy is to ensure that security practices evolve in a structured and measurable way to support the protection of customer data, payment systems, cloud environments, and internal operations. This policy supports continuous improvement by requiring regular assessment, prioritization, and enhancement of security controls and processes across the organization.

Scope

This policy applies to all SnowBe employees, contractors, consultants, system owners, developers, engineers, and third-party providers involved in designing, implementing, managing, or supporting security controls and processes. It includes all systems and environments operated by SnowBe, including AWS-hosted services, on-premise infrastructure, retail systems, applications, and supporting technologies. This policy applies to all security domains, including risk management, access control, system protection, incident response, recovery, and governance. It also applies to all phases of the system life cycle, including planning, development, deployment, operation, and maintenance.

Definitions

Capability

A specific security function or activity that supports protection, detection, response, or recovery.

Maturity Level

A measure of how well a security capability is defined, implemented, managed, and continuously improved.

Maturity Model

A structured framework used to evaluate and measure the effectiveness and progression of security practices.

Security Control

A safeguard or countermeasure implemented to reduce risk and protect systems or data.

Security Maturity

The overall effectiveness, consistency, and advancement of an organization's security program over time.

Roles & Responsibilities

Chief Information Security Officer (CISO)

Provides executive oversight of the security maturity program, defines strategic direction, and ensures alignment with business objectives and risk tolerance.

Developer

Implements security improvements within systems and applications and supports remediation of known vulnerabilities.

Information Security Department

Develops maturity assessment criteria, conducts evaluations, identifies gaps, and recommends improvements across security domains.

Operations Department

Supports implementation of operational controls, monitoring, and maintenance activities that contribute to improved security maturity.

Project Manager

Coordinates security improvement initiatives, tracks progress, and ensures that maturity-related tasks are completed within defined timelines.

System Owner

Ensures that systems meet required security maturity expectations and supports implementation of improvements within their area of responsibility.

Vendor

Must meet SnowBe security maturity expectations and support continuous improvement when providing systems or services.

Policy

SnowBe Online shall establish and maintain a formal security maturity program to evaluate and improve the effectiveness of its security practices. The organization must use a structured maturity model or assessment approach to measure capabilities across key security domains. Assessments must be conducted periodically to identify gaps, weaknesses, and areas for improvement.

Assessment results must be documented and used to prioritize improvements based on risk, business impact, and resource availability. Identified gaps must be assigned ownership and tracked through remediation efforts. Security maturity improvements must be integrated into system development, operations, and maintenance activities to ensure consistent and measurable progress.

Security maturity efforts must be continuous and adaptive to evolving threats, technologies, and business needs. Third-party providers must meet defined maturity expectations, and systems that fail to meet minimum requirements must be remediated or restricted. Exceptions must follow the formal exception process and include justification, defined scope, and timelines for improvement.

Exceptions/Exemptions

Requests for exceptions must be submitted in writing to SnowBe Online’s IT Security Manager for review and approval. Each request must include the business justification, defined scope, duration, and any compensating controls that will be applied. All approved exceptions will be formally documented, reviewed periodically for continued appropriateness, and remain valid for no longer than one year unless re-evaluated and re-approved.

Enforcement

Failure to follow this policy may result in disciplinary action, beginning with a verbal warning and escalating to written notice, suspension of system access, or termination of employment. Contractors and vendors who violate SnowBe Online’s security or compliance requirements may have their access revoked or contracts terminated. Intentional or severe violations, especially those involving customer data or payment systems, may lead to termination and potential legal or regulatory action under applicable laws.
